SUMMARY

Results-driven AI Automation & Web Developer with expertise in building intelligent automation systems, AI agents, and full-stack web applications. Proven track record of delivering end-to-end solutions spanning the MERN stack, WordPress, and modern AI/automation tooling including n8n, Python, and LLMs. Adept at translating complex business requirements into scalable digital products from automated HR workflows and AI-powered bots to responsive web platforms with a strong emphasis on system integration, team collaboration, and measurable impact.

TECHNICAL SKILLS

AI & Automation: n8n • Python • LLM Integration • AI Agent Development • Prompt Engineering • Workflow Automation

Frontend: React JS • JavaScript / TypeScript • Tailwind CSS • Elementor Pro • Avada Builder

Backend & APIs: Node JS • Express JS • REST APIs • GraphQL • YAML / API Configuration

CMS & eCommerce: WordPress • WooCommerce • Shopify

Database & Tools: MongoDB • SQL • Git • Trello • Asana

PROFESSIONAL EXPERIENCE

PhebSoft, *Solution Engineer*

Nov 2024 – Present

- Developed and deployed integration solutions on the VERSORI platform, connecting systems like Shopify, TikTok, Amazon, and Komatsu
- Configured YAML files, defined API endpoints, and used GraphQL to build efficient queries and mutations for seamless data flow between platforms
- Delivered customized integration functionalities using JavaScript and TypeScript, enhancing platform capabilities and automation
- Collaborated with clients and cross-functional teams to implement tailored solutions that improved system interoperability and overall user experience

IT Verticals, *Web Developer*

Dec 2023 – May 2024

- Managed WordPress websites using the Avada Builder, ensuring consistent updates, performance, and visual integrity
- Oversaw blog content operations including uploading, creating, formatting, and publishing articles across various websites
- Resolved technical bugs and maintained optimal website performance and user experience
- Utilized Asana for task management and Time Doctor for time tracking to ensure productivity and accountability

022 Marketing Agency, *Web Developer*

Dec 2022 – Sep 2023

- Developed and maintained web applications using React.js, WordPress, and Shopify, integrating RESTful APIs for seamless client-server communication
- Collaborated with cross-functional teams in daily Scrum meetings via MS Teams to define, develop, and deliver new features
- Conducted client meetings to gather requirements, ensuring websites were tailored to business needs and user expectations
- Managed project tasks using Trello, tracking progress and ensuring timely delivery of milestones in an agile environment

Freelance, *WordPress Developer*

Dec 2022 – Present

- Delivered a wide range of WordPress projects using Elementor Pro and WPBakery, creating fully responsive and visually appealing websites
- Customized premium themes and implemented client-specific features using plugins, shortcodes, and custom CSS/JS
- Served as both Web Developer and Project Manager for WideWing, a USA-based eCommerce store, handling full WordPress setup and third-party integrations
- Improved visibility and UX by implementing on-page SEO, performance optimization, and WooCommerce configurations

PROJECTS

AI-Powered HR Bot — n8n + LLM

- Built an end-to-end HR automation agent using n8n and LLM integration that handles employee attendance tracking, automated email workflows, and HR document generation
- Automated generation of appointment letters, termination letters, and other HR correspondence with dynamic, context-aware content using large language models
- Integrated LinkedIn API to automate job postings directly from the HR system, reducing manual effort and improving recruitment efficiency
- Designed multi-step workflows connecting HR databases, email services, and communication platforms into a unified automated pipeline

SnapSell — MERN Stack eCommerce Platform

- Developed an innovative e-commerce platform using the MERN stack with advanced fraud detection capabilities
- Designed a responsive UI using Bootstrap and Ant Design; managed state with React Context API and protected routes via React Router DOM
- Integrated Braintree for secure payment processing and Kommunicate chatbot for real-time customer support

Encryption/Decryption System — Flask + Python

- Built a secure steganography system using Flask that encrypts messages and hides them inside images using AES encryption with user-defined keys
- Implemented multi-layered security combining AES encryption and hashing algorithms; supported image upload/download for message extraction

Blog App — MERN Stack

- Designed and developed a full-featured blog application with search, create, update, and publish functionality including image support
- Integrated Redux for state management and focused on a responsive, intuitive user experience

Student Registration System — MERN Stack

- Built a registration system enabling students to select departments, generate and print challans, and upload proof for admin verification
- Developed with a clean Tailwind CSS UI and role-based access control for secure admin-side verification

EDUCATION

Bachelor of Science in Software Engineering

Sep 2020 – June 2024

SS C@SE IT, Islamabad
